

**DESIGN AND DEVELOPMENT OF HERMES: A SELF-BALANCING MOBILE
ROBOT WITH A COLLINEAR FOUR-WHEEL MECANUM DRIVE**

A Thesis

Presented to

the Faculty of California Polytechnic State University, San Luis Obispo

In Partial Fulfillment

of the Requirements for the Degree

Abbreviation	Definition
--------------	------------

Chapter 1

INTRODUCTION

1.1 Background and Motivation

1.2 Problem Statement

1.3 Research Objectives

1.4 Research Questions

1.5 Scope and Limitations

1.6 Thesis Organization

Chapter 2

BACKGROUND AND LITERATURE REVIEW

2.1 Self-Balancing Mobile Robots

2.2 Inverted-Pendulum Dynamics

2.3 Mecanum Wheels and Omnidirectional Motion

2.4 State Estimation

2.5 Control Methods

2.6 Research Gap

Chapter 3

SYSTEM REQUIREMENTS AND ARCHITECTURE

3.1 Functional Requirements

3.2 Performance Requirements

3.3 System Architecture

3.4 Subsystem Interfaces

3.5 Design Tradeoffs

3.6 Verification Plan

Chapter 4

MECHANICAL DESIGN

4.1 Mechanical Concept

4.2 Coordinate Frames and Wheel Layout

4.3 Chassis and Structural Design

4.4 Actuator and Wheel Integration

4.5 Center-of-Mass Design

4.6 Manufacturing and Assembly

Chapter 5

ELECTRICAL AND ELECTRONIC DESIGN

5.1 Electrical Architecture

5.2 Battery and Power Distribution

5.3 Controller and Sensors

5.4 Actuator Communication

5.5 Printed Circuit Board Design

5.6 Electrical Safety and Protection

Chapter 6

KINEMATIC AND DYNAMIC MODELING

6.1 Coordinate Frames and Sign Conventions

6.2 Mecanum-Wheel Kinematics

6.3 Mobility and Rank Analysis

6.4 Dynamic Model

6.5 Linearization and State-Space Model

6.6 Modeling Assumptions and Limitations

Chapter 7

CONTROL AND STATE ESTIMATION

7.1 Control Architecture

7.2 State Estimation

7.3 Balance Control

7.4 Translational and Yaw Control

7.5 Actuator Command Allocation

7.6 Discrete-Time Implementation

7.7 Saturation and Safety Limits

Chapter 8

EMBEDDED FIRMWARE AND SOFTWARE

8.1 Software Architecture

8.2 Initialization Sequence

8.3 Sensor Acquisition

8.4 Control-Loop Execution

8.5 Communication Interfaces

8.6 Telemetry and Data Logging

8.7 Fault Handling

Chapter 9

SIMULATION AND ANALYSIS

9.1 Simulation Objectives

9.2 Model Implementation

9.3 Parameters and Initial Conditions

9.4 Numerical Methods

9.5 Simulation Cases

9.6 Analysis Methods

Chapter 10

PROTOTYPE INTEGRATION AND EXPERIMENTAL METHODS

10.1 Mechanical and Electrical Integration

10.2 Sensor and Actuator Calibration

10.3 System Bring-Up

10.4 Test Equipment and Data Acquisition

10.5 Experimental Procedures

10.6 Safety Procedures

10.7 Measurement Uncertainty

Chapter 11

RESULTS AND DISCUSSION

11.1 Simulation Results

11.2 Balancing Performance

11.3 Translational-Motion Performance

11.4 Lateral-Motion Performance

11.5 Yaw Performance

11.6 Embedded-System Performance

11.7 Requirement Verification

11.8 Limitations

Chapter 12

CONCLUSIONS AND FUTURE WORK

12.1 Conclusions

12.2 Contributions

12.3 Remaining Limitations

12.4 Future Work
